About the EA:

The EA is specifically designed to trade during the New York opening session, utilizing signals generated either by AI or Prophis Signals. There is no requirement to frequently adjust the time—simply set it once during non-DST periods and adjust once when DST begins. Currently, we are in DST, so the time should be set to 15:29:30 GMT+2. There is no need to change this since the broker's time is automatically detected.

Please use MT5 exclusively and ensure that your account permits scalping. It is advisable to use the break-even buttons and consider closing all trades if you reach your daily profit target to avoid greed.

When GMT reverts to standard time, just adjust the time to 16:29:30. This adjustment is crucial regardless of your local or broker's time. Ensure you set the stop-loss and take-profit values consistent with your risk tolerance. Remember, the sets provided are for educational purposes only and should not be considered as investment advice.

For settings you can use the provided sets folder or adjust to your own liking. Please note that if your stop loss or take profit is set at less than min stops distance, SL or TP will be adjusted to the minimal accepted plus your value to avoid order not open errors.

Make sure you have enough money in your balance to open the lot size set.

For optimal performance, consider running the EA on a VPS to ensure smooth trading.

Wishing you all the best.
